XXL-Rehab Stand Tall

Strongly engineered and functionally designed exclusively for bariatric users!

The XXL-Rehab Stand Tall is a multi-functional aid; It can be used for walking, mobilising from seated to standing, it is safe to use, gives independence and has an IV option.

The XXL-Rehab Stand Tall has 2 built-in handgrips on the side which allow the user to stand up in small steps from the bed or chair being in full control of the situation. This minimises the risk of falling and therefore also minimises the risk of injury to caregiver or patient himself. Once upright the user can walk around.

The underarm-padding is adjustable in width and angle giving optimal support to the user. This function is supported in full length of the bar.

In addition, it has many handgrip-combinations and easy adjustment, everything to make the XXL-Rehab Stand Tall easy to maneuver.

The brakes are mounted onto the bar, useful in stops of course, but also in speed control and turning; the XXL-Rehab Stand Tall is a safe zone. The brakes can be locked, i.e. when getting up/sitting down.

Using 32 mm tubing ensures an almost forever lasting frame, but also gives a much more simple look and it can be cleaned in few seconds.

IV holder and holder for urine-bag are optional.

The XXL-Rehab Stand Tall is mainly designed for use in nursing homes and in hospitals.

MAX 325 kg

XXL-Rehab Rollator King

Strongly engineered and functionally designed exclusively for bariatric users!

With a weight capacity of 325 kg the XXL-Rehab Rollator King is one of the strongest walkers.

It is both functional and has a light and discrete design. It fits through doorways and folds easily for transport and storage in cars.

It includes a large seat, extra strong tubes and 8" massive tires that provide extra security, stability and comfort.

The XXL-Rehab Rollator King has a large support surface. When the user sits down heavily, the back arch prevents that the weight is placed too far – beyond the support surface. In this way, the risk of accidents is prevented significantly.

The critical point for rollators for bariatric users are the brakes. The XXL-Rehab Rollator King has "feather touch" hand brakes that provide superior control and ensure the walker is easy to maneuver and to hold the weight.

The rollator comes with a basket and the handles are fitted with reflectors.

- Extremely strong and stable lightweight
- Easy to fold and maneuver
- "Feather touch" hand brakes
- Fits through doorways and into cars
- The new design with iron forks and wide tires gives a smoother drive and safe handling

MAX 325 kg

XXL-Rehab Rollator Support

Strongly engineered and functionally designed exclusively for bariatric users!

With a weight capacity of 200 kg the XXL-Rehab Rollator Support is one of the strongest walkers.

It is both functional and has a light and discrete design. It fits through doorways and folds easily for transport.

It includes a large seat, extra strong tubes and 8" massive tires that provide extra security, stability and comfort.

The XXL-Rehab Rollator Support has a large support surface. When the user sits down heavily, the back arch prevents that the weight is placed too far – beyond the support surface. In this way, the risk of accidents is prevented significantly.

The critical point for rollators for bariatric users are the brakes. The XXL-Rehab Rollator Support has "feather touch" hand brakes that provide superior control and ensure the walker is easy to maneuver and to hold the weight.

The rollator comes with a basket and the handles are fitted with reflectors.

- Extremely strong and stable lightweight
- Easy to fold and maneuver
- "Feather touch" hand brakes
- Fits through doorways
- The underarm support helps to walk in a more upright position and minimize stress on wrist

XXL-Rehab Bariatric Walking Frame

Strongly engineered and functionally designed exclusively for bariatric users!

Especially after falling incidences, fractures etc one of the key factors of getting bariatric users mobilised is to provide them with a walking aid they trust.

The XXL-Rehab Bariatric Walking Frame is foldable and available in 2 widths, with ferrules or with 2 massive wheels in front. With 2 wheels in front the walking frame is easy to maneuver and roll across the floor. The 2 rear legs ensure that walking frame does not suddenly roll away if the user for example loses balance.

The walking frame is lightweight but solid and offers a high degree of stability. It has padded handles and the height can easily be adjusted from 76-101 cm without tools. The XXL-Rehab Bariatric Walking Frame is specially designed for users up to 270 kg.

Folds easily for transport and storage.

MAX 270 kg
