XXL-Rehab Nursing Bed

Strongly engineered and functionally designed exclusively for bariatric users!

The XXL-Rehab Nursing Bed is designed for the bariatric user who needs an extra wide bed. It is available two widths 100 cm and 120 cm. The XXL-Rehab Nursing Bed is a modern care bed with a smart design that fits both nursing homes and private homes. The bed meets both the needs of the user and the caregiver.

Robust and stable

Is very stable and therefore very suitable for those who can transfer themselves. A stable frame with 8 locking wheels ensures that the bed does not tilt or shake dangerously if the user sits down heavily.

The bed is reinforced and has a unique sturdy scissors construction. It comes with both headboards and bed rails.

Electric operation

The lying surface of the bed is divided into four with up / down feature for both the headboard and foot end. The up / down feature is operated via hand control. The hand control is clearly illustrated with the function of each button and can be placed at either side of the bed.

Good working positions

This bed is also very practical for the caregiver. The height adjustable bed surface ensures good working positions for the caregiver.

- Maximum weight capacity up to 300 kg
- Smart design that fits into private homes and nursing homes
- 2 widths; 100 og 120 cm
- 2 lengths; 200 og 220 cm

MAX 300 kg

XXL-Rehab 500 bariatric hospital bed

Strongly engineered and functionally designed exclusively for bariatric users!

The XXL-Rehab 500 bariatric hospital bed is a modern nursing bed suitable for bariatric users who weigh up to 450 kg. This bed is highly appropriate for recycling due to its adjustability.

The bed accommodates both the needs of the user and caregiver. The bed is manually adjustable both in width (90 /100 or 120 cm) and in length (200 or 220 cm), making it easy to use for multiple users with different needs, both in hospitals, in home care and in rehabilitation centers.

A stable frame and a sturdy construction ensure that the bed provides great stability for the user, also in connection with transfer. The bed also has a central braking system and directional control of the wheels. Light bed rails are available for the bed. They are removable without tools. The lying surface of the bed is divided into four with up / down feature for both the headboard and foot end.

The XXL-Rehab 500 hospital bed has separate controls for the caregiver, including Trendelenburg and anti-Trendelenburg. Operation is easy to use and the caregiver can for example adjust the bed by standing at the foot end. The caregiver also has the option to lock individual power functions; this can help prevent misalignments of the user in the bed.

The bed has a light and elegant design with rounded corners, making it very easy to clean.

- Bed rails are removable without tools
- Many adjustments available for both user and caregiver
- Very easy to clean

The bed can have a maximum load of 500 kg, including user and equipment

XXL-Rehab Alternating mattress

Pressure relief designed exclusively for bariatric users!

Bariatric users often have difficulty in repositioning themselves in the bed, or only tolerate a certain lying position because of physical restrictions. If you add internal factors such as capillary flow, oxygen tension, sweating and additional illnesses it seems obvious that pressure relieving is of great importance for the bariatric users.

The XXL-Rehab Alternating mattress is for users with a history of pressure sores, with the risk of developing new pressure sores or with existing pressure sores up to grade 4.

The XXL-Rehab Alternating mattress is controlled by a microprocessor run pump which works in an A-B cycle. The cycle time is adjustable 10, 15, 20, 25 minutes. In this way, the mattress creates movement under the user. Combined with a cell height of 21 cm it is possible to both relieve and distribute the load.

The mattress holds different functions such as "firm". Activating "firm" makes the mattress evenly hard for 20 minutes. After 20 minutes it returns to alternating. This function is of great importance for the caregiver, because it makes it much easier to either facilitate transfer, training or help in nursing situations.

The pump is almost silent due to the microprocessor run pump. It also holds an alarm function for power supply, malfunction and in case of air loss – the alarm is both visual and audible.

- Alternating mattress
- For bariatric users weighing up to 270 kg
- Pressure ulcer prevention up to grade 4
- Available in two widths and lengths

MAX 270 kg

Pump with clearly understandable display

XXL-Rehab Alternating mattress Specifications

XXL-Rehab Comfort foam mattress

Pressure relief designed exclusively for bariatric users!

The XXL-Rehab Comfort foam mattress is a standard mattress which works perfectly with nursing beds. The mattress secures a soft but still effective distribution of the load combined with a unique stability that helps the user to obtain the ability to reposition himself/herself.

The mattress is mainly intended for bariatric users with a low risk of developing pressure sores.

The bottom part of the mattress consists of a 15 cm layer of heavy duty PU foam cut into springs. This feature secures a lower "push back" effect on the user and at the same time ensures an air flow within the mattress, thereby minimizes the accumulation of heat.

On top of the 15 cm PU foam lies a 3 cm layer of viscoelastic foam. This layer ensures maximum adaption to the surface of the user and thereby also a greater weight distribution and pressure relief up to grade 2.

The XXL-Rehab Comfort foam mattress has a 2 way elastic incontinence cover. The cover is antibacterial, antiallergic and flame retardant. It can be machinewashed.

The XXL-Rehab Comfort Foam mattress can be turned horizontally in the bed to prolong the life of the mattress.

MAX 325 kg

- Fits perfectly in nursing beds
- Pressure relief mattress that also ensures the mobility of the user
