

## H2O wheelchair cushion

Perfect combination of water and pressure relieving foam

Developed and produced in Denmark, based on knowledge from leading positioning experts.  
Documented high pressure relief and intended for pressure relief up to stage 4.

H2O wheelchair cushion combines the best of two worlds, namely water and pressure relieving foam. The pressure relieving wheelchair cushion has two water cells that ensure high pressure relief with good pressure distribution and stability. Water technology helps the temperature regulating effect and increases blood flow in the tissue. Thus, the user achieves better circulation, better healing and increased comfort.

The amount of water is carefully matched to the size of the cushion. The weight of the elements varies depending on the size of the cushion. The weight range for the elements: seat width 40-45 cm is 0.9 - 1.35 kg. From seat width 50 cm and above 1.58 kg. This ensures optimum seating comfort and pressure distribution without compromising stability.

The height of the water cells is individually adjustable by means of two wedges, allowing an ergonomically correct seating position - even in case of imbalanced pelvic where the pelvis obtains a neutral position. It is possible to adjust the height of the "well". The foam is anatomically shaped, which contributes to a stable positioning. To ensure that the cushion retains its stability and temperates, a thin foam cap is placed on top of the cushion.

The cushion's elastic cover with high adaptability contributes to high comfort.

Daily maintenance is minimal.

The cushion comes with a comfort cover, which can be washed at 65°C or an incontinence cover that can be washed at 90°C.

- Possibility of asymmetric adjustment
- Anatomical shape provides stable positioning
- Good pressure distribution
- Maximum pressure relief
- Individual customization
- Minimal maintenance when the cushion is adjusted

40-120 / 120-270 kg

Comfort cover

H2O wheelchair cushion is easy to work with and has a wide range of adjustment options. Can be used for a broad target group.

## H2O wheelchair cushion

### Specifications

H2O wheelchair cushion	
Maximum weight capacity is	40-120 / 120-270 kg
Incontinence cover	Yes
Stretchable and breathable cover	Yes
Cleaning	Comfort cover, washable at 65°C. Incontinence cover, washable at 90°C.
ISO - classification	ISO 04 33 03 - 08

### Ideal use for...

- Users with pain problems.
- Users with wound problems.
- Users with asymmetric pelvis.
- Users in need of a stable support surface.
- Bariatric users.
