

PRODUCT SHEET

Bariatric Simulation Suit

Use it to get more knowledge on the movement patterns of the bariatric patient.

The Simulation Suit contributes to a better understanding of the skills that the bariatric patient has and the skills to be developed.

Used by healthcare professionals working directly or indirectly with bariatric patients.

Bariatric Simulation Suit

Wearing the Simulation suit, you get a clear sense of mobility patterns, the body's limited mobility and the many other issues that follow when the body is characterized by severe overweight.

The Simulation Suit therefore contributes important knowledge to the many professional groups who work with or meet bariatric patients in everyday life. The Simulation Suit also contributes to an improved collaboration for all parties.

The Simulation Suit is also used in seminars on transfer and for general knowledge sharing in the health sector.

The Simulation Suit comes with matching clothes and a transport bag.

The Simulation Suit can withstand dry cleaning. In addition, stains on the simulation suit can also be cleaned with products for cleaning clothes that does not contain strong acids or have strong alkaline properties.
