

PRODUCT SHEET

Cobi Positioning Cushions

Improving the quality of life of immobile patients

Cobi Positioning Cushions are developed exclusively for positioning of patients within the following patient groups: bariatric, dementia, geriatric, neurology, palliation, and chronic pain patients.

Used in e.g., care centers, institutions, hospices and in private homes.

- Pressure relieving effect.
- Anti-bacterially treated cushion cover.
- Many applications and great flexibility.
- Two different types of washable covers.
- Provides tactile stimuli.
- Developed by Cobi Rehab in cooperation with special units within dementia and neurology.

Use

Cobi Positioning Cushions helps solving different positioning issues, meeting every patients' specific needs. All cushions are developed by Cobi Rehab in cooperation with special units within dementia and neurology.

Each cushion is suitable for the following patient groups: bariatric, dementia, geriatric, neurology, palliation, and chronic pain patients. These patient groups have in common the high risk of developing tissue damage and pressure ulcers.

Recommendations for the best positioning

Stability and filling of cavities are very important when ensuring optimal positioning. Stability and filling of cavities distribute the pressure over an area as wide as possible. In this way, the user remains in the desired, natural position, without any resistance in the joints, nerve and/or muscle tissue.

Construction

In the design of Cobi Positioning Cushions, we have focused on being able to position the cushions tightly and close to the user's body.

The cushions have a certain weight which contributes to staying in place once positioned and provide both stability and support.

The cushions are filled with 3mm beads, visco elastic foam, cold-cured foam, and SEBS granules. Distribution and content are adapted to each individual cushion.

There are two types of covers, a hygiene cover, and a jersey cover. Both covers are breathable, washable, anti-bacterially treated and stretchable.

Soothing effect

In addition to reducing pressure and increasing pressure distribution, the cushions are particularly suitable for reducing spasticity, as well as providing tactile stimuli, which is recommended in cases of e.g., dementia.

Being positioned and surrounded by cushions provides a sense of being cocooned, which often has a calming effect and increases comfort.

Cleaning and maintenance

Daily cleaning

Wipe the cushions with a clean cloth wrung out in water with a mild detergent. The cushions must be completely dry before they are used again or put away.

Desinfection and wash

For surface disinfection of the cushions use disposable cloths with ethanol (e.g., Wet Wipe

Cobi U-cushion under the upper body. Cobi Cylinder cushion short under the knees. Cobi Fin cushion under the lower calves.

Large Cobi cushion under lower legs.

Cobi Flexi cushion along the front of the body.

70%) or a chlorine product 1000-1200 ppm (e.g., Wet Wipe Chlorine Desinfection).

Accessories such as hygiene covers, and jersey covers can be washed at 60° C and tumble dried.

Cobi Positioning Cushions **does not** withstand machine washing. Machine washing will destroy the filling materials.

When machine washing the covers, the zipper must be zipped, otherwise it may be damaged.
